90% Mulberry

90% Laguna Blue

Our shade Cloth is 3 bar knitted and heat set, offering excellent stability and achieving shade factors of 80 – 95% and UV blockout of upto 96%. The material suffers minimal fading during the many years exposed to the elements. Shade netting is not waterproof, however, during rainfall, most of the water disperses off the material. During heavier rain, a misting effect is created as the droplets penetrate through the finely woven fabric.

## PVC Material

PVC Dark Blue

Tonneau Black

PVC Olive Green Drab

PVC White

PVC Green

PVC Perspex (Clear)

PVC Beige

PVC Light Grey

PVC Black

PVC Blue

PVC Forest Green

PVC Terracotta

The Polyester base is a full Panama weave consisting of two yarns running together in each direction giving extra tear strength. A PVC liquid paste containing ingredients such as plasticizer, PVC, pigments and UV stabilizers helps protect the material to a certain extent from sun damage. The coated basecloth then runs through an oven at about 200 ° C where it sets and becomes the solid, flexible PVC as we know it.

## Sun Worker Range

Sunworker Grey

Sunworker Champagne

*A high-strength polyester core material, woven using the Rachel Trameur style gives it outstanding resistance to bad weather. The perforated micro structure fabric acts as a genuine heat filter repelling up to 92% of the warmth of the sun's rays thus avoiding any greenhouse effect and overheating areas during summer but maintaining warmth within during winter. By choosing a Sun worker fabrics, you can control the sun's glare while maintaining a clear view towards the outside and still preserve your inside privacy*

## Rip Block Canvas

Charcoal Rip Block

Howard Green Rip Block

Blue Rip Block

Rust Rip Block

Bottle Green Rip Block

Taupe Rip Block

Grey Rip Block

Beige Rip Block

The 100% polyester base fabric has been impregnated with an Acrylic chemical, making the product water proof, less prone to rotting and resistant to UV degradation. Woven in a block construction increases the fabric strength, limiting continuous tearing as on a plain weave. Rip stop is not a solution dyed product and will start to fade when exposed to the elements, however, dyes are sold for easy application to brighten up the fabric to its original colour.

## Discontinued Patio Range

Manufactured from a solution dyed acrylic, this range has a Teflon fabric protector making it water, oil and general soil repellent. This finish will not be affected by proprietary detergents and therefore can be washed at 40 degrees. A warm ironing treatment after washing is recommended. Included is a fungicide to protect the material from mildew and mould, however, both will grow on soiling on the fabric, so periodic washing is recommended. With all these great properties, this is a most ideal outdoor furnishings option.
